What Is A Smart Home?

- A home equipped with devices that connect to the internet and can communicate with each other or with you through your phone, tablet, or voice.

Why Does It Matter?

- Smart home technology is more than just convenience - It promotes safety, comfort, and independence.
- Smart Homes assist with Mobility - Safety - Health - Energy Savings & More!

What Do I Need To Get Started?

- A reliable Wi-Fi connection - for connectivity to devices
- A smartphone or tablet - set up and control of your devices
- A hub or assistant like Alexa, Google Assistant, or Siri is optional but helpful
- Compatible smart devices such as plugs, speakers, lights, etc.

Tips & Tricks To Get Started

- Know your goals - what do you want to accomplish? Safety, convenience, both?
- Choose ONE system and stay with it. Could be Google, Alexa, Apple, etc.
- Check internet connection and compatibility needs such as WiFi speed & devices
- Consider power options - hard wired or battery operated products
- Look for reputable brands and products that are compatible - read reviews.
- Consider placement of devices - WiFi strength, speaker volume, accessibility
- Future Proofing: Choose brands with a good track record and long-term support.
- Start small with a few devices - perhaps a speaker, camera and light bulbs
- Hire a trusted professional for installation, setup and training on how to use it
